New from Pacific Coast Contract Lighting

Energy Wise™ Is Now Available

Use compact fluorescent lamphing in almost any lighting product!

83-FLE26-4P

Our Energy Wise™ system is a hi-tech solution for re-lamphing that meets California Title 24 building code requirements for high efficient, energy saving lighting.

The California Title 24 updated Building Code states that all lighting products in commercial, non-residential new build properties after October 2005 must utilize high efficiency lamphing. Products must be hardwired and cannot work with both incandescent and compact fluorescent bulbs.

Fast Re-Lamphing

Our Energy Wise™ products allow you to use electronic compact fluorescent lamphing in almost any existing lighting product. The re-lamphing can be done in the field quickly and easily without the need for hiring an electrician.

You can change the socket from a 13 watt all the way up to a 42 watt standard based high efficacy electronic unit that accepts standard 4-pin based electronic compact fluorescent bulbs. We utilize only industry standard bases to ensure maximum flexibility in bulb choices – any standard 4-pin compact fluorescent bulb matching the wattage output on the socket will work.

83-FTR18-4P

83-FLE18-4P

We Make it Even Easier—With each Energy Wise™ product we will include a 4-pin, compact fluorescent bulb with the lamp. Our triple bi-pin bulbs have a color rating of 3000K, so you get a whiter, more natural color than other fluorescent bulbs. Best of all, replacement bulbs are a lot less expensive than those self ballasted spiral spring lamps, so you'll save money now and in the future!

 Look for the Energy Wise™ icon next to our Energy Wise™ products.

Energy Wise™ is now available as an option on all projects—we stock complete products and retro-fit kits!
